Journal of the International Skeletal Society

ISSN 0364-2348 Title No. 256

Subscription Information:
1979: Volume 4 (4 issues)

All countries (except North America):
DM 113,–; plus postage and handling. Please send your order or request to your bookseller or directly to:
Springer-Verlag
Journal Promotion Department
Postfach 105280
D-6900 Heidelberg, FRG

North America:
US $ 48.00, including postage and handling. Subscriptions are entered with prepayment only. Please send your order or request to:
Springer-Verlag New York Inc.
175 Fifth Avenue
New York, NY 10010, USA

Sample copies available upon request. Membership in the International Skeletal Society includes a subscription to this journal.

Editors-in-Chief:
Jack Edeiken, Philadelphia, PA, USA; Harold G. Jacobson, Bronx, NY, USA; Ronald O. Murray, London, GB

Consulting Editors:
L. Ackerman, C. Alexander, L. Andrén, L.W. Brady, J. Caffey, W.P. Cockshott, D. Dahlin, H.D. Dorfman, T.J. Fairbank, R. Freiberger, J.L. Gwinn, F. Heuck, J.F. Holt, J.C. Ivins, P. Jacobs, H.J. Kaufmann, T.E. Keats, J. Kirkpatrick, L.O. Langer, G. Lodwick, H.J. Mankin, W. Martel, W.T. Meszaros, J.H. Middlemiss, E.B.D. Neuhauser, A. Norman, O. Norman, H.P. Pendergrass, A. Poznanski, M. Reeder, D. Resnick, J.R. von Ronnen, F.N. Silverman, H.A. Sissons, J. Spranger, H.L. Steinbach, D.J. Stoker, E.G. Theros, E. Uehlinger, J.P. Whalen

Skeletal Radiology, the official organ of the International Skeletal Society, serves as a forum for the dissemination of current knowledge and information dealing with disorders of the skeleton. Although the radiological aspects of the many varied skeletal abnormalities are emphasized, the journal also adopts an interdisciplinary approach, reflecting the membership of the International Skeletal Society. Thus, the anatomical, pathological, physiological, clinical, metabolic and epidemiological aspects of the many entities affecting the skeleton each receive appropriate consideration.

The format of the journal consists of two principal sections. The more traditional section is concerned with the publication of proffered articles. The selection is made by the Editors-in-Chief, who have the input of a distinguished board of editorial consultants, international in scope, representing multiple disciplines concerned with disorders of the skeleton. The other section includes a number of short case presentations, each published as an unknown problem on one page with a brief discussion and answer on following pages, including histological sections where relevant and a brief bibliography of the important articles. These cases are selected from the extensive repertoire of material presented at the annual meetings of the International Skeletal Society. These cases are published, not only for their esoteric qualities, but more importantly, for their inherent value as an educational exercise. Although emphasis is placed on manuscripts of radiological interest, articles submitted from interrelated disciplines are encouraged. It is stressed also that material dealing with all fields of radiology are welcomed. Thus, in addition to diagnostic radiology, proffered material may cover thermography, nuclear radiology, computed tomography and other scanning techniques where applicable. It is hoped that the launching of this journal by the International Skeletal Society has provided an important step forward, not only for the dissemination of information for educational purposes, but also in aiding the further development of this exciting specialty.
